

1. The Event

I'm a Geoscientist, is a two week long science engagement event that takes place online. It's a game show style competition for scientists, where school students get to ask questions to researchers, and vote to decide who wins. The winning scientist gets €500 to be spent on a public science communication project.

The event gets teenagers talking to real scientists, online, to learn about real science. Students have fun, but also get beyond stereotypes, learn about how science relates to real life, develop their thinking and discussion skills and make connections with real scientists. The event is split into zones, and in each zone there are five scientists and around 350 students.

Rationale: The primary objective of the event is to change students' attitudes to the geosciences, and make them feel it's something they can relate to and discuss in a rapidly changing world. Giving students some real power (i.e. deciding where prize the money goes) makes the event more real for them.

What's involved?: You interact online with young people (aged 11–18), answering their questions about science, research, and anything else. You also read students' opinions on science and get them thinking about how science affects their daily lives. All you need to take part is a computer with an internet connection.

In addition to your profile there are three sections to the site:

Students ASK you questions which you answer in your own time; the sooner the better.

You CHAT with students online, answering their questions and hearing their opinions.

Students VOTE for the scientist they think should win a prize of €500 to spend on a science communication project. Evictions take place in the second week of the event until the winner is announced on the last Friday.

Contents

1. The Event	1
2. How to use the site	2
a. Log in	2
b. My profile	2
c. Answering questions	4
d. Live chats	4
e. Moderation of questions	5
3. Four key things you need to know	6
4. Advice on engagement	7
5. Useful links on the site	7
6. Rationale behind the event	8

Please think seriously about what you want to do with the prize money as the students will ask you about it. Some suggestions include:

- Buying equipment to allow a research oceanography vessel to communicate with school students during expeditions.
- Funding an open day for communities living in a disaster area to find out about natural hazards research and get advice.
- Giving the money to a school in Uganda to pay for science kits and a projector to watch science films on.
- Funding scientist visits to schools, or school visits to labs.
- Buying a quadcopter to film inside the rim of a volcano and help local school children understand their local natural environment.

2. How to use the site

a. Log in

Go to imageoscientist.eu and enter the username and password that we'll have emailed to you. Your username will usually be 'firstnamesurname'.

THERE IS NO NEED TO REGISTER; as a scientist you have already been pre-registered.

b. My profile

You will have a profile including a photo of you, information about you and your work, and a set of 'interview' questions. Your profile enables the students to find out more about you and your research. It's really helpful if you fill in your profile two weeks before the event, when some classes will start going to the site to do background work. When filling out your profile remember to save regularly, after filling in each section.

Log in then click on the 'My Profile' tab.

1. Click the 'Edit your profile' button at the top of the page.

A series of boxes will appear: you need to fill them in.

There are five sections to your profile.

For sections A-C you'll be asked for a one sentence summary, and then a longer version. The short versions are all displayed on one page with a 'read more' option underneath. This is because testing showed this makes it much easier for low literacy students, while it's easy for students who want to read more to access it.

Don't feel you need to write loads for the longer versions - people reading online tend to prefer shorter texts.

A. About me and my work

This lets students find out more about you and your interests, and read about what you do in more detail.

B. My typical day

Writing about your typical day gives students a tangible sense of what working as a scientist is like.

C. What I'd do with the money

Students vote for the scientist they want to win, so they want to hear what you would do with the prize money.

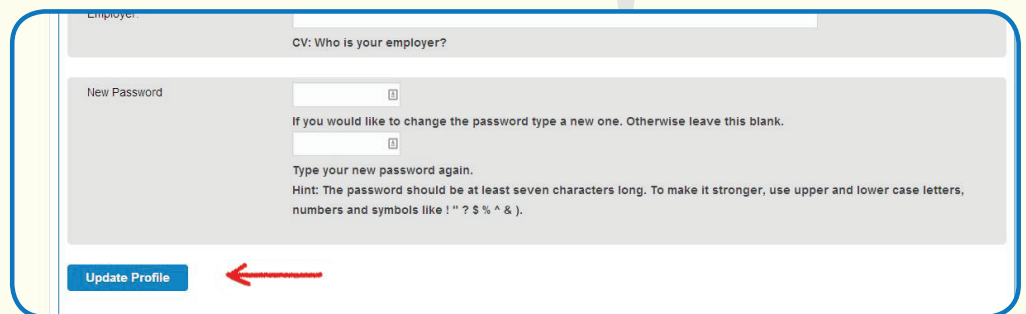

D. CV

This shows students how you've got to where you are now.

E. The interview

These questions are here to show your personal side to students, who often feel that scientists are not like real people they can relate to.

2. When you have finished, click the 'Update Profile' button at the bottom. You can come back and edit your profile at any time

Employer:

CV: Who is your employer?

New Password

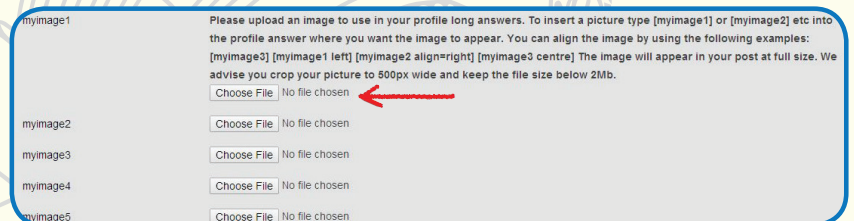

If you would like to change the password type a new one. Otherwise leave this blank.

Type your new password again.

Hint: The password should be at least seven characters long. To make it stronger, use upper and lower case letters, numbers and symbols like ! " ? % ^ &).

3. Adding images and other media

You can put photos or other images (for example, graphs or images that illustrate your research) into the long answers only of sections A-C; 'About me and my work', 'My typical day' 'What I'd do with the money', and also into the 'Work photos' section.

Please upload an image to use in your profile long answers. To insert a picture type [myimage1] or [myimage2] etc into the profile answer where you want the image to appear. You can align the image by using the following examples: [myimage3] [myimage1 left] [myimage2 align=right] [myimage3 centre] The image will appear in your post at full size. We advise you crop your picture to 500px wide and keep the file size below 2Mb.

No file chosen

No file chosen

No file chosen

No file chosen

No file chosen

To do this, upload as many images as you wish to use in the 'my images' section at the end of the list. The site will then call these images myimage1, myimage2, etc.

To insert these images into your text, type the name in square brackets where you wish it to appear. For example:-

Here's a picture of my cat [myimage1]

You can even embed videos into sections A-C from YouTube or similar. You'll need to use the embed short-handled code at the bottom of the URL:

1. Paste in the URL of the video;
2. Make sure the URL is not a link. It should not be underlined. If it is, click the link once to make it active then click the break link icon in the toolbar (it looks like a broken chain);
3. Put [embed] before the link and [/embed] after it.

However, do be aware that some school systems will block YouTube and many other video sites. This isn't necessarily a reason not to use video, as it can be very effective, but don't make understanding your profile dependent on viewing the video as it will leave out some students.

4. Changing your main photo

You can change your main photo if you wish and you should crop the picture to 108 pixels by 108 pixels. But please note, this photo will always be square in shape. If you upload a photo which is not square then the template will distort it to fit, so you may appear stretched or squashed!

c. Answering questions

You will be notified by email of all new questions. You can answer them in your own time, but the sooner the better.

- i. Log in
- ii. On your profile page you will see a 'My Unanswered Questions' box on the right hand side. Up to 100 recent unanswered questions will appear in this box as clickable links.
- iii. To answer a question, click the link and type your answer. You will also be able to view other scientists' answers to the question.

To make it easier to find questions moderators will tag keywords in questions. The keywords are then used to list any similar questions in the 'Related Questions' box on the right hand side.

It is up to you what answers to give and how much detail to go into. Don't be afraid to write a really long answer, but at the same time you don't need to write long answers. Our advice is simple – be honest, straightforward and to the point in your answers.

d. Live chats

Live chats are consistently the most popular part of the event for students, teachers and scientists. They take place in our online chatrooms, where students ask you questions and express their opinions on your work. Live chats are fun and give immediate contact between scientists and students, allowing students to relate to you. Many teachers tell us that the quieter students are more active in live chats than face to face, providing an interesting change to class dynamics.

i. You will be notified when live chats will occur

Please confirm whether you will take part in a live chat, by following the instructions in the email. This is really important for us to know if there are scientists taking part in every live chat.

The full list of live chats is available at imageoscientist.eu/live-chat, you will also receive email notifications once you are registered on the site.

ii. Log in and click on the chat icon in the top right corner

- iii. About 5 minutes before each chat booking, two chat boxes will appear on this page. The left hand one is for students, the right hand one is for scientists. Simply type in the entry box above the chat box and press return.

The screenshot shows a user interface with two main sections. The top section is titled 'Status Update' and contains a text input field labeled 'Status:' and a blue button labeled 'Update Your Status!'. The bottom section is titled 'Ask me a question!' and contains a text input field labeled 'Your question:' and a blue button labeled 'Ask This Question!'. At the top of the interface, there are three icons: 'Ask?' with a question mark, 'Chat' with a speech bubble, and 'Vote X' with a hand icon.

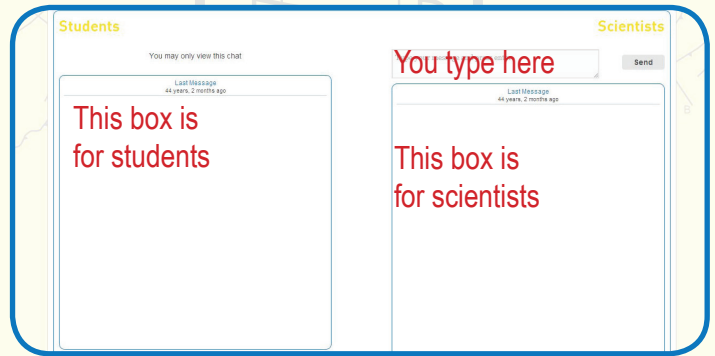

Top Tip:

To see the live chats booked in your zone, go to imageoscientist.eu/live-chat
You can filter all the booked chats by zone and date.

Tips for chat

- Chats can be very fast-paced, but also exhilarating. Enjoy it and don't worry too much about your spelling or grammar!
- Test it out by coming to the drop-in chat session (details on the separate key dates sheet) so that you've got an idea how it works.
- Remember that anyone with an academic hat next to their name in a chat is a teacher.
- Use @username to address your answer to a particular student. Otherwise they may not realise you've answered their question, and keep asking it.
- *'If you get behind on a chat room, it's better to skip a few questions and get back to the top of the screen, otherwise you keep answering questions after the students have gone!'* Moderators have had a lot of practice and they can repeat questions that have been missed.

Some other key advice:

- **Be patient.** Some young people's expressions and use of language may be different from academic discourse. It may take you a little while to understand what they are trying to ask. This is especially true when students who are not native English speakers are involved.
- **Be tolerant.** Sometimes young people can be over-excited online. Chat with them and they will calm down and engage with you.
- **Don't take offence.** Sometimes you will receive questions which seem insensitive, but usually students don't mean to be offensive. The benefit of an online event is that they feel empowered to ask. Moderators will manage any students who are being offensive.
- Keep an eye out for students who stand out in the chats and/or by the questions they ask outside of the chats. We'll ask you to nominate students who have engaged well, and one student from your zone will be selected as the winner to receive a certificate.

e. Moderation of questions – our policy

All questions are moderated before they are sent to you. The moderators work very hard to strike a balance between making your lives easier as scientist participants, and giving the young people the chance to ask real questions. Remember most students are 13 or 14 years old, although there are some 16–18 year-old students taking part too. Some classes are from Special Schools or young offender institutions. **Most students will never have had the chance to talk to a scientist before.**

Duplicates: We know you will get sent some very similar questions (believe us, the moderators wade through and weed out a lot more of them!). Moderators will take out duplicate questions, but allow through questions which may be similar, but make additional or slightly different points.

Offensive questions: Moderators will remove rude or offensive questions (there are generally very few) and anything which breaks the house rules. They will allow challenging questions. They will allow irreverent, but friendly, questions. There will always be a moderator in the chatroom to help things along. However, they are not miracle-workers, and from time to time there will be the odd chat that we cannot get on track.

3. Four key things you need to know

1. This may take about 2-3 hours per day across the two week event. In previous events, 27% of scientists spent 1-2 hours a day, 48% spend 2-3 hours a day, some spent less than 1 hour a day, but 23% said they spent more than 3 hours a day; mainly because they got really into answering questions and doing chats! Many scientists spend time in the evening answering questions.

The time involved depends, to an extent, on how many students are taking part, but also how long you spend on your answers. Classes vary on how much time the teacher spends on it and how much the kids get into it and we can't predict that beforehand. We try to even it out!

2. This is not a seminar for the super-smart scientists of the future. There will be a wide variation in the students taking part. Most will be 13 or 14 years old, but some will be older, up to 18. There will be a big variation in ability. Some will be 'gifted and talented' students, some will be lower ability classes, or have special educational needs. The point of I'm a Geoscientist is to try to engage all students, not just the ones who might go on to study science at university.

Most teenagers won't grow up to be scientists, but they will all grow up to be people. As adults they'll have to make decisions about science – as voters, as patients, as consumers – and we are trying to help them develop the skills and confidence to do that. For some, 'Where do tears come from?' or, 'Do you like your job?' may be the most pressing question they can think of. Part of the point is that this event humanises science for young people – they realise that you are 'like normal people' who they can relate to.

3. Don't be afraid to say 'I don't know'. You will be asked many questions which are not in your area. Answer what you feel you can, but don't feel you have to Google all evening to answer these questions. Part of the point of the event is that students get a more realistic idea of scientists. They can learn that, for example, there's no reason why a psychologist should know about how much the moon weighs. This makes science seem a lot less intimidating. You can be a scientist without being a genius who knows everything! That can be a liberating realisation for students.

Also, of course, many things in science aren't known. Otherwise there'd be nothing for scientists to do. And even as adults, we can learn new things all the time. This is part of the fun of science!

4. Get your boss onside. We'd strongly advise you to tell your boss you are taking part in the event, and get their support, if you can. This kind of event is an ideal way for you to fulfil outreach and engagement criteria specified in your (or your research group's) funding. Several scientists said that this made a big difference. Questions on the website can be answered during the evening, but live chats have to be during the school day so during working hours.

Also, many scientists found themselves discussing some of the more intriguing questions with colleagues. This can be one of the most stimulating things about the event. Get your lab involved in the fun! If you need ammunition to persuade your boss of the benefits, we suggest the following points:-

- Taking part in I'm a Geoscientist develops your communication skills. This is the most mentioned benefit from taking part.
- It can re-energise you about your own science, and get you thinking differently. Teenagers can ask great questions.
- It can broaden your science and your relationships with other scientists. It's easy sometimes to get stuck in your specialism. Scientists in previous events have learnt, or been reminded of many other areas of science, and even formed collaborations (or friendships) with scientists in other areas they 'met' during I'm a Scientist.
- You're 'giving something back' and contributing to science education and the future of science.

4. Advice on engagement

1. Be yourself

Our best advice is to be yourself in your answers. You don't need to pretend to like the latest pop band for young people to relate to you, being genuine is what's important.

2. Be friendly

When we asked scientists what they would do differently if they did it again, one answer that summed up many was, *'I would be less formal and more personal from the start'*.

3. Simplify your language

Even if you think you are using simple language, scientists work in an environment where there is a lot of jargon, and technical words are often used when simpler ones are available. It's easy not to realise when your language may be going over the heads of most 13 year olds.

Don't 'identify', 'find'. Don't 'utilise', 'use'. Don't 'investigate', 'look at'.

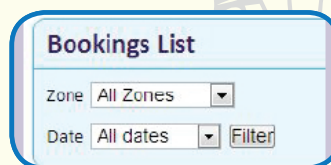

4. Talk to us!

Please communicate with other scientists and the moderation team, as well as the students. We've occasionally had scientists finish the event and say in feedback that they were having technical problems, or were worried about particular questions, or similar. We'd much rather hear at the time so we can do something about it. Let us know if you're having problems using the feedback form on the right hand side of the browser when you're logged in.

We use Twitter as a way to interact with scientists taking part in I'm a Geoscientist, amongst other things. It's a great way to communicate how the event's going, learn more about you, the scientists taking part, and ultimately keep in touch with scientists after the event. So get on board and follow the event using the hashtag #imageoscientist. You can find us at [@ImAGeoscientist](#), and The European Geosciences Union at [@EuroGeosciences](#).

5. Useful links on the site

1. See all the live chats booked at imageoscientist.eu/live-chat. You can filter the chats by zone and date.
2. Visit the staffroom at imageoscientist.eu/staffroom/ during the event to say hello, or if you've got a question for the moderators.

Zone

Date

6. Rationale behind the event:

In recent decades there has been a growing enthusiasm for “the public understanding of science”. This was originally conceived as ‘teaching the public more science’. More recently a consensus has emerged that communication is a two-way process and scientists need to engage in a dialogue with wider society.

It is also thought that in order for citizens to meaningfully participate in this dialogue and in making decisions in their lives, an understanding of the scientific process is in many ways more crucial than an understanding of specific science facts. For example understanding how peer review works, how hypotheses are tested and how scientific consensus emerges.

The European Geosciences Union (EGU) specifically addresses bringing more geoscience research into the curriculum through its Geosciences Information for Teachers (GIFT) workshops, where teachers from across the world are invited to annual gatherings of scientists to experience a fully research led environment and take inspiration for the classroom directly from the scientists. Recent topics for these events have covered Natural Hazards and Our Changing Climate as well as several other socio-economically related issues. In 2014, the EGU will also be partnering with UNESCO and the European Space Agency to bring GIFT workshops to Africa, as part of the UNESCO Earth Science in Africa Initiative.

These sometimes abstract or esoteric questions can be difficult for teachers to teach, especially when they may not have had any training in the area themselves. There is also a new recognition that real world experience or ‘experiential learning’ is far more memorable for young people and helps them to develop life skills.

This is precisely why the EGU have developed the event in collaboration with Gallomanor. The team involved have, between them, decades of experience in science education, science communication and other forms of youth engagement work. We consulted extensively with teachers throughout the development process to make sure we were producing an event that would meet their needs and actually work in the classroom.
